

# Python XLSX to CSV Assignment

**Intern:** Sumit Dhar

**Date:** 26<sup>th</sup> September, 2025

---

## Objective:

To develop a Python script that efficiently converts all sheets in an Excel (**.xlsx**) file, including those downloaded directly from a Google Sheets link, into separate CSV files. The script should support both local files and publicly accessible Google Sheets URLs, handling multi-sheet workbooks and preserving the single-header-row assumption for each sheet.

---

## Step 1: Created the folder structure:

```
xlsx_to_csv/  
├── xlsx_files/  
│   ├── Intern progress tracker.xlsx  
│   ├── Student attendance tracker.xlsx  
│   ├── .  
│   └── .  
├── csv_files/  
│   ├── Intern progress tracker/  
│   │   ├── Intern1.csv  
│   │   ├── Intern2.csv  
│   │   ├── .  
│   │   └── .  
│   ├── Student attendance tracker/  
│   │   ├── Student1.csv  
│   │   ├── Student2.csv  
│   │   ├── .  
│   │   └── .  
│   ├── .  
│   └── .  
├── converter.py  
└── requirements.txt
```

---

## Step 2: Installed all packages from requirements.txt using:

```
pip install -r requirements.txt
```

---

**Step 3:** Run **converter.py** with local **.xlsx** files by specifying path.

```
python converter.py "<path of the .xlsx file>"
```

```
(testing_DG_1) PS F:\Internship\Python\xlsx_to_csv> python converter.py "Intern progress tracker.xlsx"

```

All the sheets were converted in **.csv** format and stored in file-name directory for easy access.

**Step 4:** Run **converter.py** with google sheets, direct link of **.xlsx** files by specifying path.

```
python converter.py "<path of the .xlsx file type google sheet>"
```

```
(testing_DG_1) PS F:\Internship\Python\xlsx_to_csv> python converter.py "https://docs.google.com/spreadsheets/d/1_svIIPK90LsiYQyInkg-5ejgpBafH48UDHSPfN8d0Ps/edit?gid=1923098947#gid=1923098947"
Downloading Google Sheet from: https://docs.google.com/spreadsheets/d/1_svIIPK90LsiYQyInkg-5ejgpBafH48UDHSPfN8d0Ps/export?format=xlsx
[✓] Downloaded: downloaded_sheet.xlsx
[✓] Saved: downloaded_sheet\Overall Roadmap.csv
[✓] Saved: downloaded_sheet\GATE.csv
[✓] Saved: downloaded_sheet\Basic DSA.csv
[✓] Saved: downloaded_sheet\Intermediate DSA.csv
[✓] Saved: downloaded_sheet\Advanced DSA.csv

[✓] Saved: downloaded_sheet\Revision Problems.csv
[✓] Saved: downloaded_sheet\Most Important Things.csv
(testing_DG_1) PS F:\Internship\Python\xlsx_to_csv> |
```

The **.xlsx** file was downloaded first and then all the sheets were converted in **.csv** format and stored in file-name directory for easy access.

---

## Summary:

This project provides a versatile Python tool that automates the conversion of Excel workbooks (.xlsx) into CSV format, extracting each worksheet into its own CSV file. It accepts input as either a local .xlsx file or a publicly shared Google Sheets link, automatically downloading and processing the file when given a URL. The script uses libraries such as pandas for reading Excel data and requests for downloading files, creating an organized folder with CSV exports for all sheets. This facilitates data handling and interoperability across different platforms and tools that prefer CSV format.
